ABSTRACT

In an increasingly digitized world, the automotive industry faces challenges in accessibility, affordability, and convenience for vehicle owners and repair professionals seeking spare parts. This abstract outlines the concept of a two and four-wheeler spare parts ecommerce website, designed to address these challenges. The website's purpose is to provide a user-friendly online platform where customers can effortlessly browse, purchase, and access a comprehensive range of vehicle components.

The feasibility study explores the technical, market, financial, and regulatory aspects, assessing the practicality and potential success of such an endeavor. The study aims to determine if this innovative solution is not only feasible but also a valuable resource, streamlining the process of acquiring crucial vehicle parts.

An ecommerce website for two and four wheeler spare parts is a platform that allows customers to purchase spare parts for their vehicles online. These websites offer a wide range of spare parts for two and four wheelers, including body parts, engine and electrical components, brake and clutch parts, carburetors, bore piston kits, and more.

They offer genuine bike spare parts at low prices for various brands like Bajaj, Hero Honda, Suzuki, TVS, Yamaha, Mahindra, Royal Enfield, Kawasaki, and KTM. Customers can browse through the website by selecting the spares based on their bike model or by category .

ACKNOWLEDGEMENT

We are pleased to present “**Spares Mart**” project and take this opportunity to express our profound gratitude to all those people who helped us in completion of this project.

A work is never a work of individual. I owe a sense of gratitude to the intelligence and cooperation of those people who have been so easy to let me understand what I needed from time to time for completion of this project.

First of all, I would like to express my gratitude towards Principal **Dr. Dilip Patil Sir** for providing me a golden opportunity to do this wonderful project on "**Spare's Mart**" which also help me in doing a lot of research and I came to know about so many things and Thanks to **Co-Ordinator Dr. Yogeshwari Patil Ma'am** for your support and service during my academic year.

I would like to special thanks to Guide name Ma'am, Asst. Professor for informational support. For being available whatever help will need till the end of the project.

DECLARATION

I hereby declare that the project entitled, “**SPARE PARTS MANAGEMENT SYSTEM** ” done at **Thane**, has not been in any case duplicated to submit to any other university for the award of any degree. To the best of my knowledge other than me, no one has submitted to another university.

The project is done in partial fulfillment of the requirements for the award of degree of **BACHELOR OF SCIENCE (INFORMATION TECHNOLOGY)** to be submitted as final semester project as part of our curriculum

ANKIT KUMAR JAISWAL
DILIP YADAV
ABHISHEK GUPTA
SURAJ KUMAR GUPTA

Chapter 1:
INTRODUCTION

1. INTRODUCTION:

Welcome to our online store for all your vehicle needs! Whether you're a motorcycle enthusiast or a car owner, our website is your one-stop shop for spare parts and accessories.

We offer a wide range

of items like engine parts, brakes, lights, and much more to keep your ride running smoothly.

But that's not all! We're here to provide a complete solution for your vehicle. In addition to spare parts, we also offer access to skilled mechanics who can help with installations, repairs, and maintenance. Our website is easy to use, open 24/7, and delivers quality parts right to your doorstep. Happy shopping and driving!

1.1 BACKGROUND:

Our Two Wheeler and Four Wheeler Spare Parts E-Commerce Website was born out of a passion for automobiles and a commitment to simplifying the process of obtaining high-quality spare parts and accessories. Founded by a group of automotive enthusiasts and entrepreneurs, the website started as a small endeavor to address the challenges faced by vehicle owners in finding reliable spare parts for their two-wheelers and four-wheelers.

The founders realized that traditional methods of sourcing spare parts could be cumbersome, time-consuming, and sometimes expensive. The idea of creating a one-stop online destination for all things automotive quickly gained momentum.

1.2 OBJECTIVE :

The objective of this project is to create a user-friendly online platform offering a wide range of quality spare parts for two-wheelers and four-wheelers. The primary goals include ensuring convenience, quality assurance, a comprehensive product catalog, access to skilled mechanics, competitive pricing, excellent customer support, timely and secure delivery, mobile accessibility, and continuous improvement through user feedback. Ultimately, the project aims to simplify vehicle maintenance and enhance the overall experience of vehicle ownership for customers.

1.3 PURPOSE, SCOPE & APPLICABILITY

1.3.1 Purpose:

A two and four-wheeler spare parts website's main goal is to make it super easy for people to buy parts for their vehicles online. It should offer lots of different parts for different types of vehicles and make sure these parts are good quality. Plus, it should have fair prices, be easy to use, and provide helpful customer support. The website should also make sure people can find the parts they need quickly and get them delivered fast. They should be friendly and helpful when you have questions.

And if you need help using or installing the parts, the website can provide useful information. Finally, they can encourage customers to share their thoughts on the parts they bought and try to be eco-friendly, like by offering recycling options.

1.3.2 Scope:

1. **Product Range:** Decide what types of vehicle parts the website will sell, like brakes, filters, or accessories.
2. **Target Audience:** Identify the main customers, such as individual vehicle owners, mechanics, or businesses.
3. **Product Sourcing:** Figure out where the website will get its parts, whether it's from suppliers, manufacturers, or both.
4. **Price Range:** Set prices for products and decide if the website will focus on budget-friendly or high-quality parts.
5. **Additional Services:** Consider offering services like provide mechanics installation or maintenance.
6. **Payment and Shipping Options:** Determine how customers can pay and how products will be delivered.

1.3.3 Applicability:

1. **For Shopping Online:** The website is for buying vehicle parts on the internet.
2. **Repair People Too:** It's handy for mechanics who fix vehicles.
3. **Shops Can Buy:** Stores that sell parts can get their stock from here.
4. **Use Any Device:** You can visit it on your computer, phone, or tablet.

Chapter 2:

SYSTEM ANALYSIS

2.1 Problem Definition:

A two and four-wheeler spare parts e-commerce website faces key challenges, including inventory management to prevent stockouts, checkout processes, transparent shipping, customer support, and cybersecurity measures to safeguard customer data.

1. **Inventory Management and Stockouts:** The e-commerce website struggles with efficient inventory management, resulting in frequent stockouts and delayed fulfillment, leading to dissatisfied customers and lost sales.

2. **Product Data Accuracy:** Inaccurate or incomplete product data, such as incorrect specifications or missing compatibility information, hinders customers' ability to make informed purchasing decisions, resulting in high return rates and customer complaints.

3. **Complex Vehicle Compatibility:** The website faces challenges in providing an easy and accurate way for customers to identify spare parts compatible with their specific vehicle make, model, and year, causing frustration and confusion. Sed sales, and a stronger online presence.

2.2 FEASIBILITY STUDY:

Refers to the practicality or possibility of carrying out a specific task, project, or idea successfully. When evaluating the feasibility of something, you assess whether it can be achieved within the available resources, including time, money, technology, and personnel. Feasibility studies are commonly conducted in business and project planning to determine whether an initiative is worth pursuing. They typically consider factors such as financial viability, technical capabilities, legal and regulatory compliance, and market demand to determine whether a project or idea is feasible and can lead to successful outcomes.

Feasibility assessments help decision-makers make informed choices about whether to proceed with a particular endeavor.

- i. Economic Feasibility
- ii. Technical Feasibility
- iii. Behavioral Feasibility

• **Economic Feasibility:**

Economic feasibility is one of the aspects of project feasibility that specifically focuses on the financial aspects of a project. It involves evaluating whether a project is financially viable and whether the potential benefits outweigh the costs. Here's a simplified explanation. This is about figuring out if your project makes financial sense. Can you afford to start and run it, and will it ultimately bring in more money or other benefits than it costs to create and maintain?

- **Technical Feasibility:**

Technical feasibility assesses whether your project can be accomplished from a technical perspective. It focuses on the availability of the necessary technology, skills, and resources to complete the project successfully. Here's a simplified explanation. This means checking if you have the right tools, skills, and resources to actually do your project. Can you build it with what you have, or do you need something else?

- **Behavioral Feasibility**

Behavioral feasibility examines whether a project is acceptable and practical to the people who will use it or be affected by it. It assesses the human and social aspects of a project. Here's a simplified explanation. This is about whether people will like and be able to use your project. Will it work well with how people do things, and will they want to use it?

2.3 Current System:

The existing system refers to the current setup, processes, and technologies in place before any proposed changes or projects. It's the way things are currently done. Here's a simplified explanation. This is how things work right now. It's the way stuff is done before any changes or improvements are made.

Understanding the existing system helps plan for future changes or projects.

2.4 Proposed System:

The proposed system is the new or improved setup, processes, and technologies that are planned to replace or enhance the existing system. It's what you aim to create or implement. Here's a simplified explanation

2.5 REQUIREMENT SPECIFICATION

Since the Administrator and citizens are the main target group of our system, we will only concern about some important function for the admin and the user.

Admin:

- The Admin is the one who manipulates and maintains the system . He can enter into the system by entering login name and password.
- Admin is the one who is responsible update the information of the crime report .

User:

- Users can register their account.
- After registration he will can login into the system through email and password.

- After Successfully login into the system ,the user moves to either complaints or for visiting the links ofpdf
- In Complaint user has many options such as Mobile , Vechicle ,Person and Other Crime complaints etc.
- After filing the complaint users get complaint id which is use for the checking status of the complaint.
- And at the end he has option of feedback.
- And At the end he has to logout

2.6 Software & Hardware Requirements :

2.6.1 Software Requirements :

- **OPERATING SYSTEM - WINDOWS**
- **DATABASE - MYSQL**
- **PLATFORM - PHP**
- **USER INTERFACE DESIGN - HTML ,CSS, JAVASCRIPT JS,REACT JS**
- **WEB BROWSER-GOOGLE CHROME,MICROSOFT EDGE**
- **SOFTWARE-VISUAL CODE**

2.6.2 Hardware Requirements

- **PROCESSOR -INTEL CORE i5**
- **RAM - 8 GB**
- **HARD DRIVE - 1 TB**
- **SSD-500GB**

2.7 JUSTIFICATION OF SELECTION OF TECNOLOGY

A survey of technology typically refers to a systematic examination or analysis of various aspects of technology within a specific domain, field, or industry. The goal of a technology survey is to gather information, data, and insights about the current state, trends, and developments in technology related to a particular area. These surveys are often conducted by researchers, organizations, or experts in the field to gain a better understanding of the technological landscape, identify emerging technologies, assess the impact of technology on society or business, or make informed decisions about technological investments or strategies.

- **Tools:**

The tools that we are using for this software are as follows.

Microsoft Visual Studio Code (VS Code):

is a lightweight and versatile source code editor developed by Microsoft. It's available for Windows, macOS, and Linux, making it accessible to a wide range of developers. VS Code stands out for its extensibility, allowing users to enhance its functionality through a vast library of extensions available in the Visual Studio Code Marketplace. Despite its lightweight nature, it offers integrated development environment features, including debugging, version control integration, intelligent code completion, and more. With its integrated terminal and support for a wide range of programming languages, Visual Studio Code has become a popular choice for developers seeking a customizable, efficient, and free code editor.

- **Html**

HTML, or Hypertext Markup Language, is the backbone of web pages. It consists of tags that define the structure and content of a webpage. These tags indicate elements like headings, paragraphs, links, and images. Browsers use HTML to render web content, making it an essential language for creating and formatting websites.

- **CSS**

Cascading Style Sheets (CSS) is a crucial web technology used to design and format web pages. It allows developers to control the layout, typography, colors, and visual presentation of HTML content. CSS simplifies web design by separating content from styling, making it easier to create appealing and responsive websites.

JavaScript

JavaScript is a versatile, high-level programming language commonly used for web development. It allows for dynamic and interactive content on websites, enabling user interactions, form validation, and more. JavaScript runs in web browsers and can be utilized on the server-side as well, making it a fundamental tool in modern web development.

- **MYSQL**

MySQL is commonly used in a wide range of applications, from content management systems and e-commerce platforms to data-driven business applications. It is available in both open-source and commercial versions, with MySQL Community Edition being the free and open-source option. Many organizations and developers choose MySQL for its performance, reliability, and cost-effectiveness when building and managing databases.

- **PHP**

PHP is a versatile server-side scripting language used for web development. It generates dynamic web pages by embedding PHP code within HTML, making it easy to create interactive websites and web applications. MySQL, on the other hand, is an open-source relational database management system frequently paired with PHP. It efficiently stores and retrieves data, making it ideal for web applications. Together, PHP and MySQL form a powerful combination for building dynamic and data-driven websites.

- **SQL**

SQL (Structured Query Language) is a specific language used to communicate with databases. It's like a set of commands that allows you to ask a database for information or make changes to the data it stores. With SQL, you can create, read, update, and delete data in a structured and organized way. It's essential for anyone who needs to work with databases, whether you're managing data, building applications, or analyzing information. SQL is a standard language that's widely used across different database systems, making it a valuable skill for anyone dealing with data.

2.8 PLANNING AND SCHEDULING

Project Planning and Scheduling', though separate, are two sides of the same coin in project management. Fundamentally, 'Project planning' is all about choosing and designing effective policies and methodologies to attain project objectives. While 'Project scheduling' is a procedure of assigning tasks to get them completed by allocating appropriate resources within an estimated budget and timeframe.

Project Planning

- **Define Objectives:** Clearly state the project's goals and what we aim to achieve with project
- **Scope and Requirements:** Document the project's scope, including all the features and functions project should have, based on our requirement specification.
- **Budget and Resources:** Determine the budget required for the project and allocate resources like hardware, software, and personnel accordingly.
- **Risk Assessment:** Identify potential challenges or risks that could impact the project and develop strategies to mitigate them.
- **Technology Stack:** Select the appropriate technologies and tools required for project development.

Project Scheduling

Project scheduling is a detailed plan that breaks down the project into smaller tasks, assigning time frames to each, to ensure the timely completion of project, here's a simplified view of how project scheduling might look:

❖ **Task Identification:** Break down the entire project into smaller tasks.

For instance:

- Research and design
- User interface design
- Testing and quality assurance

❖ **Task Sequencing:** Determine the order in which tasks should be performed. Some tasks may depend on the completion of others, so sequencing is crucial.

❖ **Resource Allocation:** Assign the necessary resources (personnel, technology, etc.) to each task. Ensure that the right people with the appropriate skills are available.

❖ **Regular Monitoring:** Continuously monitor the progress of tasks, and update the schedule as necessary. This ensures that the project stays on track.

❖ **Communication:** Regularly communicate with team members, stakeholders, and users to keep everyone informed about the project's progress and any adjustments to the schedule.

> **Risk Management:** Address potential risks that could impact the schedule and develop strategies to mitigate them

Gantt Chart:-

2.9 WORK BREAKDOWN STRUCTURE

2.10 CONCEPTUAL MODEL:

The various phases of **Iterative Waterfall** model are as follows:-

1. **Requirement Analysis:-** Requirement analysis also called requirement engineering, is the process of determining user exceptions for a new or modified product. This features are called requirements, must be quantifiable, relevant and detailed. For the development of the proposed system the requirements of the users are:
 - a. The rent a book of reader to make it convenient for both.
 - b. To have all the book at one place of reader .so he easily look and rent it in limit time and many more feature.
 - c. To overwhelming from messy books in library and library polices
2. **Design:-** Software designers to come out with the best architecture for the software. Hence, with the requirements defined in multiple designs for the product architecture are present in the Design Document Specification (DDS). In the design phase, we will be designing the software by the different diagrams like Class diagram, ER diagram, Use case diagram, Event table.
3. **Coding and Unit testing:-** In the coding phase software design is translated

into source code using any suitable programming language. Thus each designed module is coded. The aim of the unit testing phase is to check whether each module is working properly or not. Requirements are written in the coding language and transformed into computer programs which are called

4.Integration and System Testing:- After completing the coding phase, integration and system testing phase is performed to check the behavior and validity of the developed product and if there are any error found then the process starts again from the requirement gathering.

5.Maintenance:- In the maintenance phase, after deployment of the software in the working environment there may be some bugs, some errors or new updates are required. Maintenance involves debugging and new addition option.

Chapter 3:

SYSTEM DESIGN

3.1 Modules Division

A. User (non-Register) Module.

Home:

Users can visit the website and check the detail of SPARE PARTS & ACCESSORIES, MECHANICS services.

Spare parts & Accessories:

In this section, The can view detail of spare parts of two wheeler and four wheeler and Accessories and there price ,description,images..and so on.

Mechanics Services:

In this section, The user can get detail from mechanics related to vehicle and also get mechanics allocatedfor repairing,fixing the spare parts.

About Us:

Users can see the details of the website administrator.

Contact Us:

Users can see the contact detail and contact with the website administrator like(Number,Email). Registration: In this section, user can register for website .(After the Register ,user will get email andsms verification along with payments link for online payments and user can download a fees receipt(Invoice).)

B. User (Register/Login)Module.

Login User:

User can view details about their Product dispatcher status ,product price, product add cart option ,Subscription(optional).
Mechanics Module.

User Registration and Login:

Users (mechanics) should be able to register with their personal information, such as name, contact details, and credentials.

User Profiles:

Allow mechanics to create and manage their profiles, including adding a profile picture, a short bio, andtheir areas of expertise.

Query Handling:

In this section, Mechanics can be able to view and respond to incoming service requests. Admin or System will implement a notification system to alert mechanics about new queries.

About us: In this section, user (mechanics) provide their information like (name, location, number, Email id..so on).

Admin Module.

Admin: In this section, admin can update his/her profile, Change password, and logout.

Dashboard:

In this section, admin can briefly view total User, total Product, total registration, total new registration user, Total login, total product sell, total stock, status stock, total payments.

Spare parts Status :

In this section, admin can manage the products & accessories.

Mechanics:

In this section, admin can manage the mechanics availability, payments, subscriptions.

Pages:

In this section, admin can manage about us and contact us pages.

Registration:

In this section, admin can view new, accepted, rejected registration and also give a remark. And sending a verification email and sms.

Report:

In this section, admin can view the sales details and check registration details in a particular period.

Invoice:

In this section, admin can view and manage the invoice.

Search Registration:

In this section, admin can search registration details with the help of his/her registration number.

3.2 DATA DICTIONARY :

A database schema is a blueprint of relational database. It include the physical schema, which is hardware of the database, in the logical schema which is design of the data and tables inthe database .The logical schema is what - programmers, database administrator and users work width.

1. Admin Database:
2. User & Customer Registration Database
3. Mechanics Database
4. Spare Parts or Stock database
5. Payment Database
6. Order Database

1. Admin Database:

FEILD	DATATYPE	LENGTH	KEY
A_Id	Varchar	20	Primary Key
A_Password	Varchar	20	Primary Key

2. User & Customer Registration Database:

FEILD	DATATYPE	LENGTH	KEY
User_Id	Varchar	20	Primary Key
User_Password	Varchar	20	Primary Key
User_Name	Varchar	40	Not Null
User_Contact	Varchar	12	Not Null
User_Email	Varchar	30	Not Null
User_Address	Varchar	80	Not Null

3. Mechanics Database:

FEILD	DATATYPE	LENGTH	KEY
M_Id	Varchar	20	Primary Key
M Name	Varchar	20	Not Null
M_Contact	Varchar	12	Not Null
M Location	Varchar	80	Primary Key

M_Fees	Varchar	20	Not Null
M_Review	Varchar	100	Not Null

4. Spare Parts or Stock database:

FEILD	DATATYPE	LENGTH	KEY
St_Id	Varchar	20	Primary Key
St_Name	Varchar	20	Not Null
St_Type	Varchar	20	Not Null
St_Quantity	Varchar	20	Not Null
St_Description	Varchar	50	Not Null
St_Price	Varchar	20	Not Null

5. Payment Database:

FEILD	DATATYPE	LENGTH	KEY
Pay_Id	Varchar	20	Primary Key
Pay_Amount	Varchar	20	Not Null
User_Id	Varchar	20	Foreign Key
St_Id	Varchar	20	Foreign Key
Order_Id	Varchar	20	Foreign Key
Transaction_Id	Varchar	25	Not Null
Card	Varchar	50	Not Null

6. Order Database:

FEILD	DATATYPE	LENGTH	KEY
Order_Id	Varchar	20	Primary Key
User_Id	Varchar	20	Foreign Key
St_Id	Varchar	20	Foreign Key
Value	Varchar	20	Not Null
Quantity	Varchar	20	Not Null
Location	Varchar	50	Not Null
Invoice no.	Varchar	20	Primary Key

3.3.E.R Diagrams

```

4.2 TESTING APPROACH

1. Functionality Testing:

- Check if users can register, log in, and log out successfully.
- Test the search function for spare parts and mechanics.
- Verify that product listings, shopping cart, checkout process, and order management work smoothly.
- Test mechanic booking system for scheduling appointments and service selection.
- Ensure users can leave reviews and ratings for products and mechanics.

2. Compatibility Testing:

- Test the website on different web browsers (Chrome, Firefox, Safari, Edge) and devices (desktop, tablet, mobile).
- Ensure the website is responsive and functions well on various screen sizes and resolutions.

3. Performance Testing:

- Check website load times and server performance under normal and peak loads.
- Optimize loading times for pages, images, and content to improve user experience.

4. Security Testing:

- Scan for vulnerabilities such as SQL injection and cross-site scripting.
- Ensure sensitive data is encrypted and stored securely.
- Implement measures to prevent unauthorized access to user accounts and data.

5. Usability Testing:

- Conduct tests with real users to evaluate ease of use, navigation, and overall experience.
- Gather feedback on design, layout, and functionality to identify areas for improvement.

There are many approaches to test the software:

4.2.1 Unit Testing.

4.2.2 Integration Testing.

4.2.3 Beta Testing.

4.2.1 Unit Testing.

Unit testing for your online website can be approached systematically to ensure comprehensive coverage of the key functionalities. The testing process begins with user authentication testing, which includes scenarios such as registration, login, and logout procedures. This ensures that user accounts are created and managed securely.

Following user authentication, product management testing is conducted to verify the functionality related to product listing, displaying product details, and enabling product search capabilities. This ensures that users can easily find and view the products they are interested in purchasing.

Shopping cart testing comes next, focusing on operations such as adding items to the cart, removing them, and updating the cart contents. This ensures that the shopping cart functions smoothly and accurately reflects the user's selections.

Order management testing is essential to validate the order placement process, order details display, and order status updates. This ensures that users can successfully place orders, view their order history, and track the status of their orders.

Finally, mechanic management testing is performed to ensure the smooth functioning of the mechanic section. This includes testing mechanic listing, mechanic profiles, and mechanic search functionalities to ensure users can

easily find and interact with mechanics for assistance.

4.2.2 INTEGRATION TESTING

Integration testing for your online spare parts and mechanic website involves verifying that all the individual components of your system work together seamlessly to deliver the intended functionality. This testing phase focuses on testing the interfaces and interactions between different modules, ensuring that they integrate correctly and produce the expected results.

During integration testing, you'll systematically test how each component interacts with others, including user authentication, product management, shopping cart, order management, and mechanic management modules. For example, you'll validate that the user authentication system integrates smoothly with the registration and login functionalities, allowing users to create accounts and log in securely.

4.2.3 BETA TESTING

Beta testing for your online spare parts and mechanic website involves releasing the system to a limited group of external users, typically representing your target audience, to gather feedback and identify any potential issues before the full-scale launch. During this phase, the focus is on evaluating the system's usability, functionality, and overall user experience in a real-world environment.

You'll invite a select group of beta testers, which may include existing customers, potential users, or individuals from your target market, to explore the website and provide feedback on their experiences. Beta testers will interact with different features of the website, such as browsing products, adding items to the cart, placing orders, accessing mechanic services, and providing feedback on their interactions.

The primary goals of beta testing are to uncover any usability issues, bugs, or glitches that may have been missed during earlier testing phases and to

gather insights into how users perceive and interact with the website. Beta testers are encouraged to report any issues they encounter, such as broken links, navigation difficulties, payment processing errors, or inconsistencies in the user interface.

4.2.4 MODIFICATION AND IMPROVEMENT

1. Evaluate user feedback and performance data to identify areas for improvement.
2. Plan and prioritize modifications based on the most critical needs and potential impact on user experience and business goals.
3. Implement changes, such as updating website features, optimizing performance, or enhancing user interfaces.
4. Conduct thorough testing to ensure that modifications function as intended and do not introduce new issues or errors.
5. Deploy changes to the live website once they have been thoroughly tested and verified.
6. Monitor user feedback and performance metrics post-implementation to gauge the effectiveness of modifications.
7. Iterate on modifications based on ongoing feedback and data analysis to continue improving the website over time.

4.3 TEST CASE

SR NO	Test Case	Case Type	Excepted Result	Pass/Fail
1	User registration	All field is must to be filled(.Required)	Please fill out this field. - All field is must to be filled.	Pass
		Email validation	Check email pattern	Pass
		Check user exist by email	user exist and use same email in the past registration fail	Pass
			If user is new and new email is there which not have any past record then the registration successful	Pass
		Password validation	Password validation	Pass
		Phone Number	The phone number is set to be 10 digit only and number type should be enter only	pass
		Full Name	Name should not content numerical and special character	pass
2	User Login	Email is incorrect	Invalid email id or Password	Pass
		Correct email but wrong password	Invalid email id or Password	Pass
		email and password is correct	Redirect to home .	Pass
3	Admin	All field is must to be filled.(Required)	Please fill out this field.	pass
		User name is wrong	Invalid user id or Password	pass
		Correct User name but wrong password	Invalid user id or Password	pass
		Login successfully	Admin redirected to admin DashBoard	pass
4	Search engine	The Search on spare's parts name	The search on the name	Pass
		Searched incorrect	No result found	Pass

Chapter 6:
**CONSULTATION AND FUTURE
WORK**

6.1 Conclusion :-

1. **Product Offering:** Your website provides a wide range of spare parts for cars and bikes, catering to the needs of vehicle owners looking for replacement parts. This diverse inventory ensures that customers can find the parts they need conveniently.
2. **Mechanic Services:** In addition to selling spare parts, your website also offers mechanic services. This feature adds value to your platform by providing customers with access to professional assistance for installation, repairs, and maintenance.
3. **User Experience:** The user experience on your website is likely designed to be intuitive and user-friendly. Customers can easily browse through the available products, search for specific items, and place orders seamlessly. Providing detailed product descriptions and images can enhance the shopping experience further.
4. **Information Accessibility:** Customers can access information about mechanics available through your platform. This includes details such as their qualifications, expertise, availability, and customer reviews. This transparency helps customers make informed decisions when choosing a mechanic for their vehicle needs.
5. **Customer Support:** Your website likely offers customer support channels to assist users with any inquiries, issues, or concerns they may have. This ensures that customers receive prompt assistance and fosters trust and satisfaction with your brand.

6.2 Limitations of the System :-

1. **Geographic Reach:** Limited reach to certain areas due to logistics constraints.
2. **Competition:** Facing stiff competition in the automotive market.
3. **Technical Challenges:** Potential issues with website performance, security, and scalability.
4. **Inventory Management:** Complexity in managing diverse spare parts inventory.
5. **Customer Trust:** Building and maintaining trust regarding product quality and service reliability.
6. **Regulatory Compliance:** Compliance with industry regulations and standards.

6.3 Future Scope of the Project :-

1. **User Experience:** Improve website navigation and search functionality.
2. **Mobile Optimization:** Ensure seamless browsing experience on mobile devices.
3. **Product Range Expansion:** Add new categories of spare parts and accessories.
4. **International Expansion:** Explore new markets and adapt website for global audiences.
5. **AI and Automation:** Implement technologies for streamlined processes.
6. **Customer Engagement:** Build community through social media and content creation.

Chapter 7:

REFERENCE

We express our sincere gratitude to all those people who helped us in gathering the information while preparing this project. To prepare this project we required information regarding how to develop efficient & proper software on Online Book Rental System.

Reference Website:

1. <https://www.google.com>
2. <https://www.youtube.com>
3. <https://www.chatgpt.com>
4. <https://www.W3School.com>
5. <https://www.Stackoverflow.com>

I extend heartfelt thanks to my Classmates for their invaluable help in the project And My Partner, their support and collaboration were instrumental in its success. Grateful for their dedication and expertise, which greatly enriched the project.
